E-BREVET INSTRUCTIONS

You have already entered the event so you just need to download & open the mobile phone app and set the e-brevet for this ride. Your smart phone will need to have mobile data turned on or access to WiFi to use the e-brevet web service.

The short getting started instructions are:

- Open the e-brevet app and from the '…' menu go to Settings and sign in with your Audax UK username & password
- In Settings enter the Brevet Code to **26-204**, save
- return to the '…' menu then click 'Download Brevet'
- You will then be able to 'register' at each control location on the ride instead of completing the physical brevet card, including not needing to note the info control answers!
  Note: there is no alert when at the control or automatic registration – you must stop and register at each location.
- **At the Arrivée control** fill in the short survey and tap OK to record and upload your brevet. A confirmation email will be sent to you and the Organiser

If on the ride the app does not recognise that you are physically at the control location try closing and re-opening the e-brevet app to resync the GPS tracking.

At the finish show your completed e-brevet to one of the controllers so they can tick you off the arrival list.
